

# Ecommerce and Selling on hacker forums

Some forums are helpful, whereas many are blatant scams. Most of the forums we came across have urged us to purchase “leaked” credit cards containing huge monetary amounts for as low as 50\$. There’s no actual way of knowing if the websites are a scam unless we pay, but nobody is going to offer 3000\$ worth credit card for the price of 20\$ (intuition).

However, there are some website where you can approach other hackers to hack for you. Similar to hiring a hitman. Many of these websites are hosted in Russia/ Ukraine and some are currently inaccessible due to the war tensions in the area. A lot of the websites also force you to create an account to access but due to the websites being available in russian language only, it was difficult to navigate around for the research.

We also came across forums that have been seized for misuse or violation of country laws & policies.

# Creating an account on Hacking Forums

For creating an account, we here will take the example of blackhost. It is a darknet website and can be only accessed via the tor browser.

- After making sure, we are connected to the tor network. We can find this website by accessing the hidden wikipedia or the uncensored hidden wikipedia.

The hidden wikipedia allows us to access current active links easily for most websites such as wikileaks, filesharing websites, darknet social media and email providers and some extremely illegal websites as well. There are tor search engines such as haystack, torch or notevil. But these search engines show too many spam links along with the original link. Which could be difficult for a newbie to distinguish.

Hidden wikipedia usually has trusted links. We can also search for such forums on hidden answers forum, where we can ask a query and get anonymous answers.

[TheHidden.Wiki](#) TOR Onion Directory

## Verified Dark Web Links 2022

### Hidden Wiki

Hidden Wiki has been the directory for TOR onion links for the past decade, listing only verified dark web links.

Last Updated on August 2022.

Install TOR Browser from <http://torproject.org/>

Uncensored Hidden Wiki can be accessed using [wiki47qon6teydid7xeqb6l7uj6jueacxlgtk3adshox3zdohvo35vad.onion](http://wiki47qon6teydid7xeqb6l7uj6jueacxlgtk3adshox3zdohvo35vad.onion)

Take a minute and check our [scam list](#) to know more about dark web scammers.

# Creating an account on Hacking Forums

- Once you have navigated to the blackhost website, you will be greeted with the following screen.

Here, we are allowed to access limited resources and similarly like clearnet websites, we would be required to login for accessing the full functionality of the website such as chatting with other hackers, uploading files, interesting games that improve our hacking skills, webmail and other such services.

- To create/login to our account, we simply click the user button and we will be redirected to a new page.

## Welcome

Welcome to BlackHost, a small website focused on technology and security, offering open source programs and free anonymous services available also on the dark side of the web.

## News

Sunday 12th December 2021 - Security Hardening#109

BlackHost has now enforced encryption on all traffic towards its services: plaintext connections will either be redirected to a secure channel or dropped. Specifically this applies for the web interfaces and the mail server. The mailserver security has also been hardened, implementing DNSSEC, DANE TLSA and dropping connections using weak protocols.

Friday 14th May 2021 - SPAM Abuse#108

Due the repetitive service abuse, BlackHost has put some restrictions on the number of outgoing emails per user. Hopefully this small change will pass unnoticed by polite users.

Tuesday 11th May 2021 - Onion Email SSL#107

The email service facing the TOR network with the v3 address can be now accessed using SMTPS, POP3S and IMAPS.

Monday 10th May 2021 - Onion v3 SSL Certificate#106

BlackHost has now implemented a verified SSL certificate for its onion v3 address, which is now the set as the default Onion-Location. Since HTTPS traffic hasn't been enforced yet, you can either try the new certificate manually or you can try it by clicking here.

# Creating an account on Hacking Forums

- And we will be redirected to a new page where we will have to input the following information. Some forums make it compulsory to have a darknet hosted email service (not hosted by the hacking forum). In this particular forum, we are required to create an email account along with the forum account (email service is hosted by the hacking forum).

# Creating an account on Hacking Forums

- Once we have successfully logged in, we can navigate around the website normally and have access to the entire website including chat features and mail services. Through these chat services you can get in touch with other hackers willing to help us out with any information we need. Such forums also allow us to hire hackers.
